We are creating a future where local communities can use robotics for social good. Please contact us at humans@werobotics.org for questions.

Find the full version of the Humanitarian Code of Conduct on our website under werobotics.org/codeofconduct.

Drone Code of Conduct for Social Good
werobotics.org/codeofconduct
Drone Code of Conduct for Social Good

**Fly Responsibly**

- Operate drones with a clear purpose; humanitarian, environmental, and any other benefits should clearly outweigh the risks to persons, wildlife, nature, or properties.
- Respect the principles of humanity, neutrality, impartiality, and independence.

**Do No Harm**

- Familiarise yourself with local laws regulating drone use, and coordinate your actions with the local Civil Aviation Authority.
- Be sure to operate with the relevant permissions and be extra cautious when deploying in conflict zones due to their sensitive nature.

**Be Open**

- Share flight activities as widely as possible, ideally publicly, and engage with local communities before deploying.
- Coordinate and create partnerships with other organizations working in the area to increase effectiveness.

**Be Prepared**

- Collect, use, manage, share, and store data responsibly. Only collect information that is needed, applying informed consent where possible and employing mitigation measures where it is not.
- When possible, share your data openly to increase the impact of your work.

**Think about your data**

- Get training and practical experience with your drone equipment before deploying in the field.
- Take responsibility for your actions and be liable for any issues involving harm to people and property.
- Create contingency plans for unintended consequences such as the crash or loss of a drone.
